IN LIFE

intersam[®]
label company

Our company, which provides label services to many different sectors from food to automotive, cosmetics to metal industry, continues its activities as an approved supplier of national brands.

From 1998 to the present...

Intersam Label, which provides label services to many different sectors from food to automotive, cosmetics to metal industry, by producing at international standards with innovative ideas, has been one of the leading companies in the label sector by attaching importance to machinery and technology investments since its establishment in 1998.

We continue our activities as an approved supplier of national brands, with our state of the art machinery, wide product range and experienced staff, in our factory with a closed area of 2000 square meters located in the Nilüfer OSB, and we offer high quality service to our customers with modern designs.

The demands and satisfaction of our customers are our greatest road guide. We are increasing our market share in the sector day by day by designing world-class quality products without forgetting our responsibilities towards our country and our environment.

Multi-colored labels, cold foil applications, adhesive surface printing (reverse printing), partial lacquer applications, rotary cutting (leaf knife), both 9 color UV Flexo, 5 Color Flexo, 5 Color Offset printing machines in our production line. We can produce multi-colored double-layer labels on the surface, as well as produce unprinted labels used by the industry with many laterpress and rotary cutting machines in our unprinted label production line.

Intersam Label has been with you for more than a quarter of a century and will continue to walk with you to the better and the best without compromising its quality.

Everyone talks about quality and experience.

Quality needs **experience** and
experience takes **time**.

Label is the **Identity** of the Product.

In today's world, where advertisement and presentation are of great importance in product sales, we, as Intersam Etiket, adopt the labels of our business partners and prepare labels for our own products, as if we are doing infrastructure and design studies.

With each new label, it answers many of your questions such as which surface it will stick to, how long it will stay on the surface without deformation, how it will be affected by external environmental effects, where the product will appeal to, and more effective attention for your products with the right label material, the right design and the right printing. We produce attractive labels.

Double Layer Label Printing

While we can print in color on the upper surfaces of double-layer labels, we can also print in two colors on the adhesive surfaces at the same time.

Label Preference

Labels vary depending on the structure of the product on which they will be adhered, the area of use, storage conditions and duration. Choosing the right material before printing is very important for the quality, durability and cost of the product.

Our RMA personnel, who are experts in their fields, evaluate each order from our customers and advise on the use of appropriate labels when necessary.

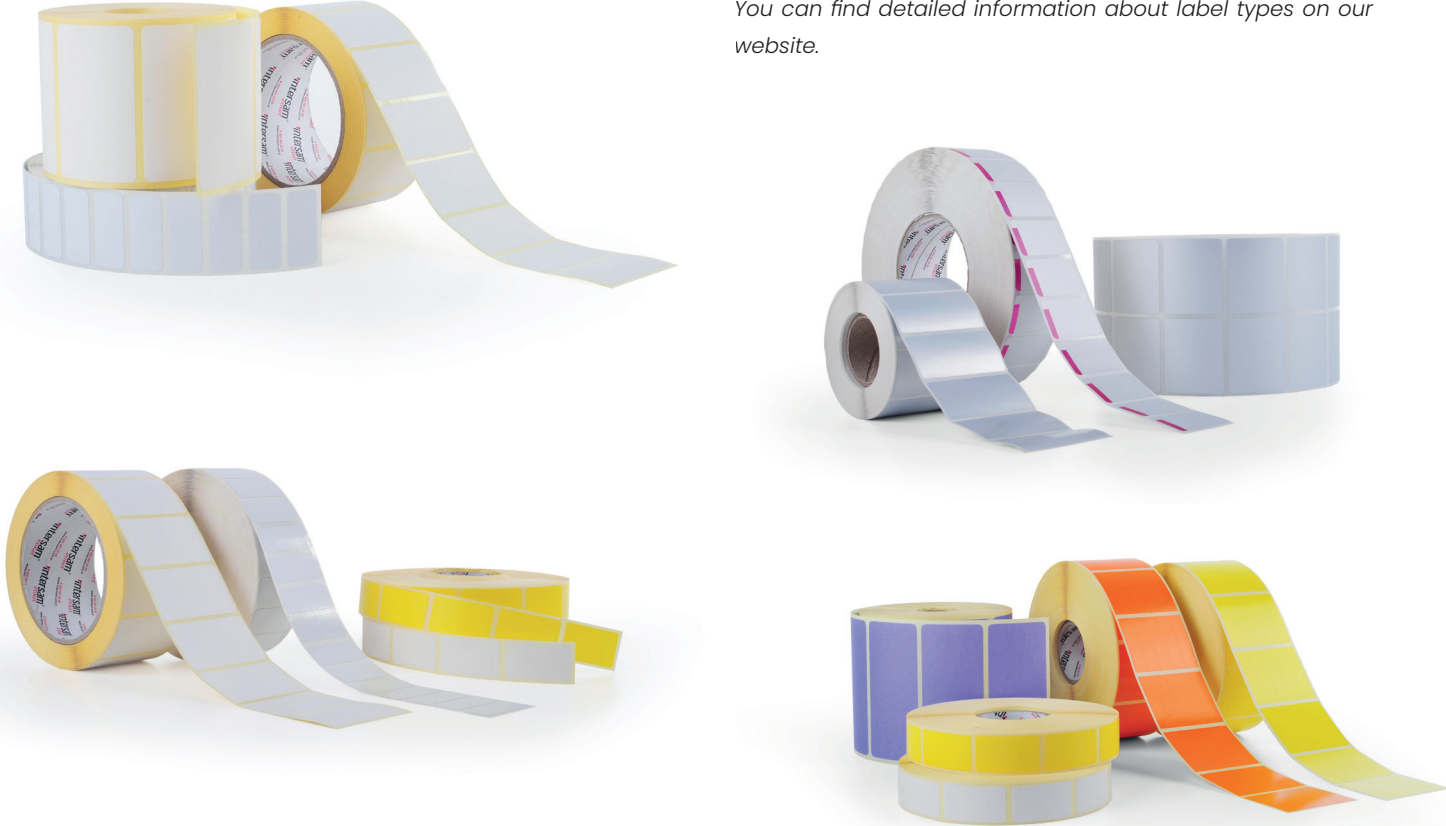

Unprinted – Floor Printed Labels

- Too many varieties in your product portfolio?
- Do you have to have separate labels for each product?
- The information on the labels you printed has changed and you cannot use the labels?

Intersam recommends unprinted or semi-finished labels for RMAs with this type of use.

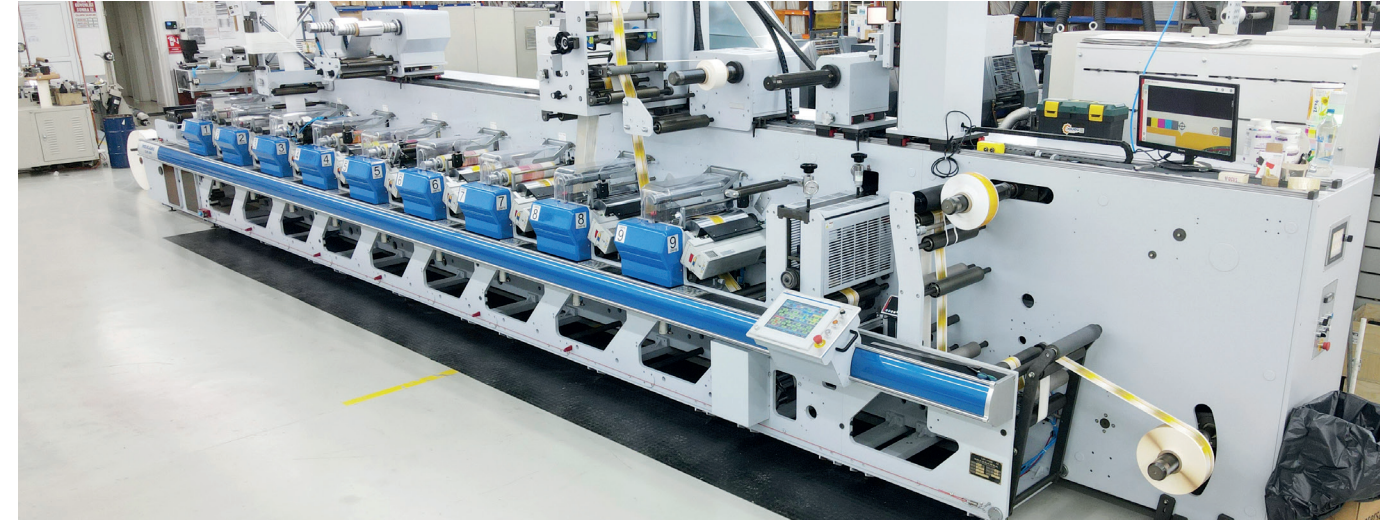

Semi-finished labels are labels where unchanged information such as product brand, RMA name and place of manufacture are printed on the label and only variable information can be printed by your RMA.

You can find detailed information about label types on our website.

Ribbons

Ribbon is a ribbon process in roll form used in barcode printers with thermal transfer printing method. One surface has ink that melts at a certain temperature, and the other surface has a protective and carrier layer. Wax Ribbons, Wax-Resin Ribbons and Resin Ribbons, which we offer to the market with the Intersam brand, are of American origin and work without any problems in all barcode printers.

Flexo Printing Machine

- 9 color full UV printing
- Nine color printing in one pass
- 2 color printing on adhesive surface
- Cold gilding
- Rotary cutting (Online cutting)
- Multi-colored double-layer label
- High speed
- Cliché printing
- UV drying in each unit
- Lamination unit

Offset Printing Machine

- 5 color full UV printing
- Double pass feature
- Possibility of printing in low numbers
- Partial lacquer application
- UV drying in each unit

Digital Printing Machine

- Roll-to-roll digital printing
- Possibility of low-volume printing
- Printing without clichés and molds
- Much more vibrant colors

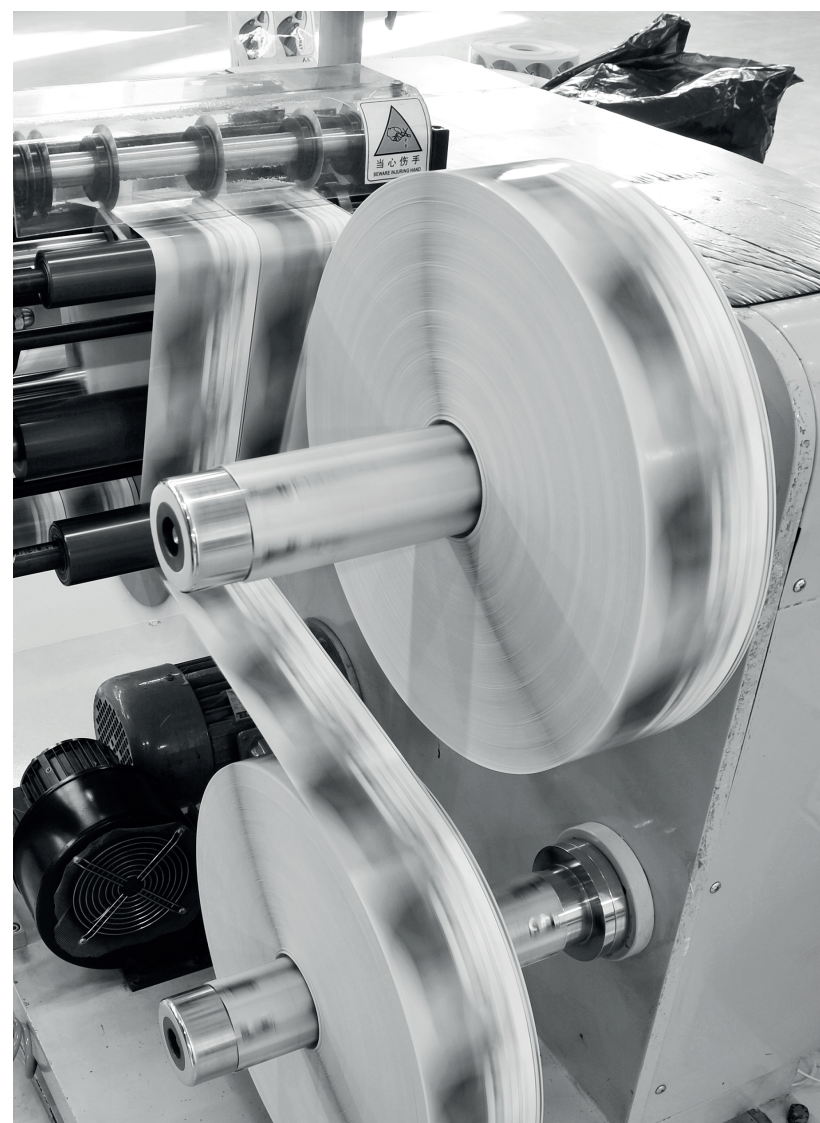

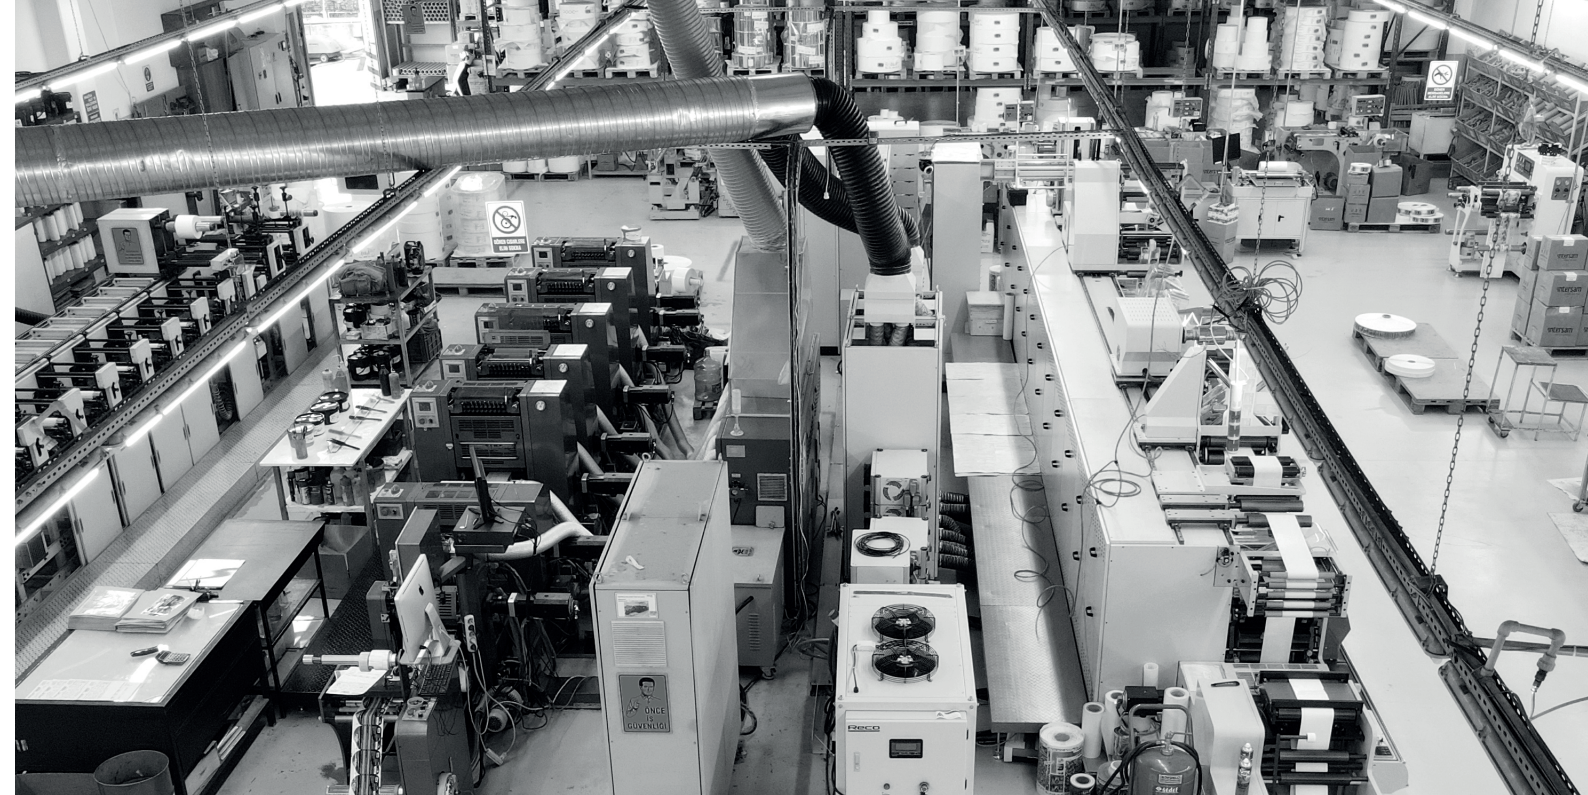

Colors Under Control

During the printing phase, color values are measured with a Spectrophotometer and each print is printed with the correct color values.

LABEL INDUSTRY

We believe that product labels are one of the most powerful visual communication tools between the consumer and the manufacturer, and we do our business with the principle of **“Do the best if you will, be the best if you will be”**.
